

strEAM+
POWERED BY MAXGRIP

Optimized asset performance in Oil & Gas

In today's business environment and market conditions, the oil and gas industry is facing multiple challenges. Safety remains paramount in all exploration and production activities, but improving asset reliability is just as crucial to stay competitive in the face of many uncertainties. strEAM+ for IBM Maximo enables the development of an effective asset performance optimization strategy.

Offering real-time insight into your critical assets, strEAM+ was specifically developed by MaxGrip to enhance your reliability and maintenance engineering processes. Increasing uptime while complying with all safety standards and regulations is key in the oil and gas industry. strEAM+ allows you to gather and analyze data quickly and effectively, creating real-time and full-time asset awareness while reducing risks and costs.

THE RIGHT TOOLS

strEAM+ provides the right information, exactly when and where you need it, to enable sound decision-making. It offers the right tools to balance cost and risk in the most responsible manner. Improving your asset availability will benefit your bottom line immediately. Complying with the latest applicable ISO, RCM and RBI standards, strEAM+ is well worth the investment and typically earned back within months.

Companies with a strategic approach to Asset Performance Management (APM) are among the market leaders. The comprehensive functionality of strEAM+ is fully integrated into IBM Maximo, ensuring easy adoption in a familiar working environment. strEAM+ can be extended and fortified with the modules RCM, RCA, RBI, Predictive Modeling, Maintenance Models, and Compliance Manager, for which separate factsheets are available.

COST CONTROL

By applying industry-specific asset data, strEAM+ gives you the capabilities to meet the greatest challenge in the capital-intensive oil and gas industry – reducing operational costs. Price volatility is not the only trigger. Shareholders are pressing companies to maximize value by cutting expenses, and several supermajors have already declared their capex to be at its peak. A strong focus on operational efficiency will remain a priority for many years to come. strEAM+ delivers deep insight into asset criticality and risks, balanced against cost and productivity objectives.

ASSET RELIABILITY

The oil and gas industry is an asset-intensive business. Rigs, platforms, pipelines, terminals, and refineries are costly to build, operate, and maintain. Keeping tight control over the total life-cycle cost of all this equipment is a major concern. strEAM+ shows a clear path to the future by placing asset reliability at the heart of your business, and facilitating the development of a comprehensive and effective asset performance management (APM) strategy.

MAINTENANCE STRATEGIES

Predictive asset analysis allows your company to run different scenarios and move from reactive to proactive maintenance. The library functionality saves massive amounts of time by enabling rapid deployment, reviews and upgrades of RCM-strategies, also in greenfield and brownfield projects. Using its unique ISO-compliant library of industry best practices, complemented with information about specific locations and assets, strEAM+ makes it a lot easier for decision-makers to understand how different maintenance strategies affect their business objectives.

AGING WORKFORCE

strEAM+ can be used to schedule and manage work orders, including the necessary materials and equipment, more efficiently than ever before. The superior data management properties also allow oil and gas companies to do more with limited resources, and take the hurdle of the aging workforce. Skilled human resources are growing scarce as up to 50 percent of the industry specialists will retire in the next decade. strEAM+ enables the effective

retention and distribution of specific operational and technological know-how.

REGULATORY COMPLIANCE

With several major incidents still fresh in the public mind, government regulations are being tightened up everywhere. Companies have to expect lots of change and uncertainty with regard to compliance, and be ready to constantly modify business processes to conform to new standards. strEAM+ is the ideal tool to cope with the risks this challenge poses to companies lacking the operational transparency to make well-founded decisions about compliance-related adaptations.

SAFETY MANAGEMENT

Safety has become a matter of knowing it and showing it. strEAM+ not only identifies your critical assets and high-risk activities, but also creates visibility while you manage your line of defense. Daily monitoring increases organizational awareness of regulated assets. All analysis and each compliance-related work order, including any deviations, can be made fully traceable and auditable. strEAM+ thus provides the basis for solid safety management and the implementation of an overall compliance strategy.

Powered by MaxGrip

strEAM+ is a solution of MaxGrip, the world's front-runner in Asset Performance Management. Directly embedded into your EAM system, strEAM+ ensures easy adoption, operational focus on reliability, data integrity and real-time insight into asset performance. strEAM+ is the best integrated software solution available today to efficiently balance risks and costs against your business objectives.

MaxGrip is innovative and ambitious. It is our mission to make the world a safer place. We believe that all asset-related incidents can be prevented. By analyzing risks and optimizing maintenance, we enable our clients to focus on their core business and make continuous improvement a way of life.

MaxGrip has an exceptional track record in bridging the gap between theory and practice. We live and breathe reliability, using only proven methodologies to help clients everywhere to meet their Asset Performance Management objectives. The world's largest enterprises already rely on MaxGrip every day.
